

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, October 9, 2019 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (104 new fires)
New large incidents:	0
Large fires contained:	1
Uncontained large fires:***	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 11 large fires being managed under a strategy other than full suppression.
*** Uncontained large fires include only fires being managed under a full suppression strategy.

Ten Year Average Fires (2009 – 2018 as of today)	51,794
Ten Year Average Acres (2009 – 2018 as of today)	6,382,507

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://qacc.nifc.gov/>

Predictive Services Discussion: The cold front moving across the Northern Rockies will continue to strengthen as it begins to move out into the Great Plains. Moderate snowfall amounts are expected across the High Plains, Wyoming, and possibly Nebraska and eastern Colorado. As the cold air begins to settle into the Great Basin, a surface high pressure will develop and will produce strong east Foehn winds across the northern half of California. Wind flow across Southern California will gradually become off shore as a short-duration Santa Ana wind event begins to set up. In the East, high pressure will begin to redevelop over areas east of the Mississippi River and will allow temperatures to return to average levels. Most areas will be dry as little precipitation is expected.

Aviation Watch Outs

Aviation Category

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?

Flight Hazards: Have they been identified and assessed? Have the pilots been informed?

- Should the operation or the flight be stopped due to a change in conditions?
Consider the following:
 - Radio Communications.
 - Environmental Conditions – weather, visibility, terrain, elevation, temperatures.
 - Mission Priorities.
 - Successful Mission Completion Probabilities.
- Is there a better way to do it?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?
 - Multiple aircraft.
 - Mixed types of aircraft.
 - Poor visibility.
- Do you have an escape route?
- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
